

## The Cross Rule for Writing Chemical Formulas

Recognize this:

1. the **combining capacity** of an element is defined as a **number** which represents the ability of the element to combine with another element and the combining capacity is given in the table of elements beside the element.
2. compounds with 2 elements in them end in 'ide' (such as sodium chloride).

The rules for formula determination are:

1. Write each element with its combining capacity as a **superscript** up and to the right.

2. Cross the numbers to the other element into a down **subscript** position.

3. Drop any value of 1 and reduce any common factors like in math.

4. When giving this formula an English name, be sure it ends in 'ide'

This rule works for all compounds if you are careful, although things get a bit more complex as we go further. The reasons for why these rules work are a topic in Grade 11 and 12 Chemistry. Don't rush it, do it exactly this way, and you will amaze yourself with your abilities in chemistry.

**Formula Assignment #1**  
**Compound Names and Formulas**  
Elements with ONE Combining Capacity ONLY

**A. Name these Compounds**

- |                                |                                   |
|--------------------------------|-----------------------------------|
| 1. $\text{Li}_2\text{S}$ _____ | 10. $\text{GeF}_4$ _____          |
| 2. $\text{CaO}$ _____          | 11. $\text{Ga}_2\text{O}_3$ _____ |
| 3. $\text{NaF}$ _____          | 12. $\text{EsCl}_3$ _____         |
| 4. $\text{CaBr}_2$ _____       | 13. $\text{Fm}_2\text{O}_3$ _____ |
| 5. $\text{MgCl}_2$ _____       | 14. $\text{Mg}_3\text{N}_2$ _____ |
| 6. $\text{BBr}_3$ _____        | 15. $\text{Rb}_2\text{O}$ _____   |
| 7. $\text{Cs}_2\text{O}$ _____ | 16. $\text{RaO}$ _____            |
| 8. $\text{FrBr}$ _____         | 17. $\text{SrO}$ _____            |
| 9. $\text{Ag}_2\text{S}$ _____ | 18. $\text{Tc}_2\text{O}_7$ _____ |

**B. Write the correct chemical formula for these compounds by using the cross rule.**

- |                             |                              |
|-----------------------------|------------------------------|
| 1. sodium chloride _____    | 11. hydrogen oxide _____     |
| 2. magnesium fluoride _____ | 12. francium nitride _____   |
| 3. silver oxide _____       | 13. rubidium phosphide _____ |
| 4. indium bromide _____     | 14. potassium oxide _____    |
| 5. zinc bromide _____       | 15. beryllium sulphide _____ |
| 6. neodymium oxide _____    | 16. lithium sulphide _____   |
| 7. thorium sulphide _____   | 17. hydrogen bromide _____   |
| 8. actinium oxide _____     | 18. strontium nitride _____  |
| 9. radium bromide _____     | 19. calcium oxide _____      |
| 10. cesium oxide _____      | 20. tantalum nitride _____   |

Name: \_\_\_\_\_

**Formula Assignment #2**  
**Compound Names and Formulas**  
**Elements with TWO OR MORE Combining Capacities**

**A. Write the correct formula for the following compounds, all of which have been named using the modern Roman Numeral Method. The combinign capacity is given after the first element (metallic) in Roman Numerals.**

- |                                     |                                  |
|-------------------------------------|----------------------------------|
| 1. copper (II) oxide _____          | 11. manganese (III) oxide _____  |
| 2. mercury (I) oxide _____          | 12. vanadium (II) bromide _____  |
| 3. gold (III) chloride _____        | 13. niobium(V) oxide _____       |
| 4. thallium (III) bromide _____     | 14. titanium (III) oxide _____   |
| 5. bismuth (V) oxide _____          | 15. titanium (III) nitride _____ |
| 6. terbium (III) oxide _____        | 16. iron (II) oxide _____        |
| 7. uranium (VI) oxide _____         | 17. cobalt (II) phosphide _____  |
| 8. protactinium (III) bromide _____ | 18. tin (II) oxide _____         |
| 9. cerium (III) oxide _____         | 19. thulium (II) bromide _____   |
| 10. arsenic (V) sulphide _____      | 20. copper (II) bromide _____    |

**B. Determine the combining capacity of the first element by using the reverse cross rule. Name the compound using the Roman Numeral Method.**

- |   |  |
|---|--|
| 1. SnCl <sub>4</sub> _____              | 9. PdF <sub>4</sub> _____                |
| 2. BiBr <sub>5</sub> _____              | 10. Os <sub>2</sub> O <sub>3</sub> _____ |
| 3. PoO <sub>2</sub> _____               | 11. <sup>Mo</sup> Br <sub>3</sub> _____  |
| 4. Pbl <sub>2</sub> _____               | 12. <sup>V</sup> Cl <sub>5</sub> _____   |
| 5. HgO _____                            | 13. Mn <sub>2</sub> O <sub>3</sub> _____ |
| 6. HgCl _____                           | 14. CoO _____                            |
| 7. Au <sub>2</sub> O <sub>3</sub> _____ | 15. Np <sub>2</sub> O <sub>3</sub> _____ |
| 8. FeCl <sub>2</sub> _____              | 16. V <sub>2</sub> O <sub>5</sub> _____  |

Name: \_\_\_\_\_

**Formula Assignment #3**  
**Compound Names and Formulas**  
**Elements with ONE, TWO OR MORE Combining Capacities**

**A. Write the correct formula for the following compounds.**

- |                               |                                   |
|-------------------------------|-----------------------------------|
| 1. gallium oxide _____        | 11. silicon oxide _____           |
| 2. mercury (I) chloride _____ | 12. aluminum bromide _____        |
| 3. tin (IV) bromide _____     | 13. tin (II) sulphide _____       |
| 4. indium oxide _____         | 14. germanium (III) bromide _____ |
| 5. cadmium sulphide _____     | 15. nickel (II) oxide _____       |
| 6. magnesium oxide _____      | 16. strontium astatide _____      |
| 7. potassium nitride _____    | 17. aluminum oxide _____          |
| 8. iron (III) sulphide _____  | 18. copper (II) oxide _____       |
| 9. gold (III) bromide _____   | 19. lawrencium fluoride _____     |
| 10. zinc oxide _____          | 20. actinium oxide _____          |

**B. Determine the combining capacity of the first element by using the reverse cross rule. Name the compound correctly. Only include the Roman Numeral in the name if the first element has 2 or more combining capacities.**

- |   |  |
|---|--|
| 1. CaBr <sub>2</sub> _____              | 9. AsCl <sub>5</sub> _____               |
| 2. K <sub>2</sub> O _____               | 10. Eu <sub>2</sub> O <sub>3</sub> _____ |
| 3. Fe <sub>2</sub> O <sub>3</sub> _____ | 11. NdBr <sub>3</sub> _____              |
| 4. ZnF <sub>2</sub> _____               | 12. Cu <sub>3</sub> N <sub>2</sub> _____ |
| 5. CuCl _____                           | 13. CoS _____                            |
| 6. Ni <sub>2</sub> O <sub>3</sub> _____ | 14. ZrO <sub>2</sub> _____               |
| 7. AuCl _____                           | 15. Li <sub>2</sub> O _____              |
| 8. HgBr _____                           | 16. NaH _____                            |

Name: \_\_\_\_\_

**Formula Assignment #4**  
**Compound Names and Formulas**  
**Compounds with Polyatomic Ions**

**A. Write correct formula for these compounds. They all contain polyatomic ions.**

- |                               |                                      |
|-------------------------------|--------------------------------------|
| 1. ammonium chloride _____    | 11. gold (III) hydroxide _____       |
| 2. sodium chlorate _____      | 12. sodium carbonate _____           |
| 3. sodium sulphate _____      | 13. calcium hydrogen carbonate _____ |
| 4. potassium sulphite _____   | 14. ammonium nitrate _____           |
| 5. calcium phosphate _____    | 15. ammonium carbonate _____         |
| 6. calcium hydroxide _____    | 16. ammonium sulphate _____          |
| 7. iron (III) hydroxide _____ | 17. lithium phosphate _____          |
| 8. copper (II) sulphate _____ | 18. iron (III) sulphate _____        |
| 9. sodium phosphite _____     | 19. potassium hydroxide _____        |
| 10. lithium chlorate _____    | 20. ammonium hydroxide _____         |

**B. Name the following compounds which contain polyatomic ions correctly.**

- |                                       |  |
|---------------------------------------|--|
| 1. $\text{CaCO}_3$ _____              | 11. $\text{Zn}(\text{OH})_2$ _____     |
| 2. $\text{NaHCO}_3$ _____             | 12. $\text{Ca}(\text{OH})_2$ _____     |
| 3. $\text{NH}_4\text{OH}$ _____       | 13. $\text{Cr}(\text{OH})_3$ _____     |
| 4. $\text{H}_2\text{SO}_4$ _____      | 14. $\text{Ca}(\text{ClO}_3)_2$ _____  |
| 5. $\text{NaNO}_3$ _____              | 15. $\text{Pb}_3(\text{PO}_4)_2$ _____ |
| 6. $\text{Fe}_2(\text{CO}_3)_3$ _____ | 16. $\text{BaCO}_3$ _____              |
| 7. $\text{Al}_2(\text{SO}_4)_3$ _____ | 17. $\text{Be}(\text{OH})_2$ _____     |
| 8. $\text{HOH}$ _____                 | 18. $\text{Li}_3\text{PO}_4$ _____     |
| 9. $\text{Ca}(\text{NO}_3)_2$ _____   | 19. $\text{Fe}_2(\text{CO}_3)_3$ _____ |
| 10. $\text{Li}_2\text{CO}_3$ _____    | 20. $\text{H}_3\text{PO}_4$ _____      |

**Formula Assignment #5**  
**Compound Names and Formulas**  
**Compounds that use the Prefix System**

**Prefixes and their meanings**

mono = 1, di or bi = 2, tri = 3, tetra = 4, penta = 5,  
hexa = 6, hepta = 7, octo = 8, nona = 9, deca = 10

*USE - 1)  
NON METALS AND  
DO NOT USE (S)*

**A. Write the correct chemical formula for these compounds. The prefix in front of the element indicates how many of that atom will be in the compound. DO NOT USE THE CROSS RULE FOR THESE COMPOUNDS.**

- |                                 |                                |
|---------------------------------|--------------------------------|
| 1. carbon monoxide _____        | 11. boron trichloride _____    |
| 2. carbon tetrachloride _____   | 12. carbon tetraiodide _____   |
| 3. carbon dioxide _____         | 13. boron trichloride _____    |
| 4. sulphur dioxide _____        | 14. carbon tetrafluoride _____ |
| 5. sulphur trioxide _____       | 15. aluminum tribromide _____  |
| 6. diphosphorous trioxide _____ | 16. selenium trioxide _____    |
| 7. carbon tetrafluoride _____   | 17. nitrogen trifluoride _____ |
| 8. lead dioxide _____           | 18. sulphur dichloride _____   |
| 9. dihydrogen dioxide _____     | 19. nitrogen dioxide _____     |
| 10. selenium trioxide _____     | 20. dinitrogen tetroxide _____ |

**B. The following elements exist in nature as diatomic molecules (2 atoms per molecule). Write the formula for each of these elements.**

- |  |                       |
|--|-----------------------|
| 1. hydrogen gas _____ H <sub>2</sub> _____ | 5. fluorine gas _____ |
| 2. chlorine gas _____                      | 6. bromine gas _____  |
| 3. nitrogen gas _____                      | 7. iodine solid _____ |
| 4. oxygen gas _____                        |                       |

Name: \_\_\_\_\_

**Formula Assignment #6**  
**Compound Names and Formulas**  
**Summary**

**A. Write correct formula for these compounds.**

- |                             |                                     |
|-----------------------------|-------------------------------------|
| 1. boron chloride _____     | 11. magnesium carbonate _____       |
| 2. aluminum hydroxide _____ | 12. calcium hydroxide _____         |
| 3. silver sulphide _____    | 13. cesium sulphide _____           |
| 4. iron (II) iodide _____   | 14. carbon tetrachloride _____      |
| 5. copper (I) oxide _____   | 15. hydrogen gas _____              |
| 6. tin (IV) nitrate _____   | 16. carbon disulphide _____         |
| 7. zinc bromide _____       | 17. beryllium nitrate _____         |
| 8. nickel (III) oxide _____ | 18. sodium hydrogen carbonate _____ |
| 9. ruthenium sulphide _____ | 19. water _____                     |
| 10. titanium oxide _____    | 20. lanthanum oxide _____           |

**B. Name the following compounds correctly.**

- |  |   |
|--|---|
| 1. H <sub>2</sub> O _____                | 11. Al <sub>2</sub> O <sub>3</sub> _____    |
| 2. PbI <sub>2</sub> _____                | 12. CO <sub>2</sub> _____                   |
| 3. MgCl <sub>2</sub> _____               | 13. SiO <sub>2</sub> _____                  |
| 4. Na <sub>2</sub> O _____               | 14. NO <sub>2</sub> _____                   |
| 5. HgCl <sub>2</sub> _____               | 15. H <sub>2</sub> SO <sub>4</sub> _____    |
| 6. Ag <sub>2</sub> O _____               | 16. NaClO <sub>3</sub> _____                |
| 7. Na <sub>3</sub> PO <sub>4</sub> _____ | 17. AuCl <sub>3</sub> _____                 |
| 8. CaCO <sub>3</sub> _____               | 18. BiCl <sub>5</sub> _____                 |
| 9. FeCO <sub>3</sub> _____               | 19. Rb <sub>3</sub> N _____                 |
| 10. YBr <sub>3</sub> _____               | 20. Ba(NO <sub>3</sub> ) <sub>2</sub> _____ |
